DETAILED ACTION

1. In view of the amendment of June 22, 2006, previous 103(a) rejection over gore et al'673 in view of Cremeans et al'297 is hereby withdrawn.
2. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1, 8 and 9 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicants are stating in the amended claim

1, that the 3-dimensional object, onto which the energy field is to be applied, is formed from the dispersion of a crystalline, radiochromic polyacetylene monomer having a conjugated structure and that an energy field is applied to the 3-dimensional object to initiate polymerization of the polyacetylene monomer.

However, there is no support for such statement in the original disclosure. In the original disclosure, the polyacetylene monomer is contained in an image display receiver, not in the 3-dimensional object onto which an energy field is to be applied. (see [0004] and original claim 1). After an energy field is applied to a 3-dimensional object (which is a separate component from an image display receiver), and after the object is optically scanned, the summation of 2-dimensional representations of optical changes in the object are visually recorded *on the image display receiver*, which comprises a radiation activated metal salt of a crystalline, thermochromic polyacetylene having a conjugated structure, to provide a permanent, 3-dimensional *image* of the object.
